Box No. II Priority

1. The following document has not yet been furnished:

- copy of the earlier application whose priority has been claimed (Rule 43bis.1 and 66.7(a)).
 translation of the earlier application whose priority has been claimed (Rule 43bis.1 and 66.7(b)).

Consequently it has not been possible to consider the validity of the priority claim. This opinion has nevertheless been established on the assumption that the relevant date is the claimed priority date.

2. This opinion has been established as if no priority had been claimed due to the fact that the priority claim has been found invalid (Rules 43bis.1 and 64.1). Thus for the purposes of this opinion, the international filing date indicated above is considered to be the relevant date.
3. Additional observations, if necessary:

<p>The inventions relating to claims 1-18 are described in document 1 cited in the ISR; therefore, they do not appear to be novel or involve an inventive step. Document 1 (paragraphs 0007-0041, figs. 1-5) describes a broadcasting receiver for reproducing and outputting a video signal and/or audio signal transmitted from a broadcasting station, wherein a range in which an error can be corrected and guard interval period are used to cause information such as other receivable broadcasting stations and radio attributes of such broadcasting stations to be stored in a memory table so that, when a receiving radio needs to be switched to other stations, extraction is performed from the memory table; and determination of other stations' radio attributes such that various information including a name, content, and genre of a program being broadcasted are determined. More specifically, it describes that, during the period when no input signal corresponding to the selected service is received, an input signal corresponding to the services other than the selected one is received, and supporting information, title information or service program information relating to video data are stored as zapping data so that when the service selection is changed, extraction is performed. Also, as the information of the broadcasting content including a video signal, using still image data contained in the video data, and using text data as a program name information would be obvious to a party skilled in the art.</p>
